Propositions

1. The birth of digital pedagogy is a side effect of the birth of the information society.

2. In digital pedagogy one of the most important scenes of the teaching-learning process is the DTLE (digital teaching-learning environment).

3. In DTLE the role of the teacher changes: (s)he isn't a primary source of information any more, but rather manages and authenticates information via dialogues with the students.

4. Digital support of pedagogical management is an important part of the DTLE, which means that the planning, management and administration of education makes the usage of different management-support software systems inevitable.

5. Results and data of the experiments done during the usage of the DTLE can be used with the appropriate concepts and methods to further develop the structure of the education system and also the content used in it.
