Theses:

- 1.** I draw up the model and defined relationships of Quality Management with other departments and partners of a pharmaceutical company. (Fig.1. and Fig.2.)
- 2.** Computer systems will absolve contrasts of continuous improvement and traditional pharmaceutical approach. Synergies of computer and quality management systems give advantages to pharmaceutical industry first of all in tracing, following-up changes, identification, validation, registration and handling of documentation.
- 3.** Quality Function Deployment (QFD) can be used successfully in case of software implementation when quality parameters can be converted to numeral data with a lot of difficulty.
